

## Subject 3 - Notes 30/09

- Tried "new database" to find data before facilitator led by saying the db was already on the computer, clicked restore "would have been better if it said import database"
- Clicked restore "would have been better if it said import database"
- Restored db quickly

### Flows:

- Quickly understood right-clicking to create a new flow
- Doubt as to whether or not to add a description
- Tried to type when entering "ref flow property"
- Missed a Flow to create: didn't feel like there was a clear way to see each flow

### Process:

- Easily found how to add new process: right click on process
- Felt like there should be a different icon for adding a process and a flow
- Created the forgotten flow under the new process window
- Selected the wrong flow to associate when searching: limited visibility?

### Inputs/Outputs

- Used plus icon to add
- "I wonder if double clicking works", it does
- Confused about entering transportation unit:
  - Confused about how to enter formulas
  - Changed the unit before to make sure she didn't forget it
  - "I'm not good at conversion"
  - Tried changing the unit by double clicking
- Provider: felt like it should have been automatic
- Amount didn't understand that it had to equal input
- Didn't notice the wrong output flow

- Issues around computer uses
- Repeatedly double clicked on different inputs/outputs when entering amounts → opening general page
- Quickly overwhelmed by all the tabs
- Did not check error in output
