Subject 1 - Session 1 Notes

(Clemence)
Subject 1:
- "It may have messed it up"

Path Followed:
- Knows that databases split
- Multiple filetypes: lack of compatibility:
    - Full database, Sometimes linked database
- Database long to load
- Set Max memory usage to see if affects speed of download
- Cannot look up options (eg reference flow)
- If you don't create a folder: put at the end

Errors made:
- Started making process before making all the flows

Inputs/Outputs
- Right click instead of + button, but remove with x
- Units: don't convert
- Doesn't automatically: input amount = output amount
- Inputs too long require main search: not obvious search bar is for inputs
- Cannot scroll for search for input
- Cannot change reference flow
- Output need to equal sum of outputs

Restart - Access to the info tables
- Knows that not necessary to follow sequentially
- Changing names doesn't refactor
-
